Rødt is the challenger we need in the fight against inequality

A strong Rødt means actual, positive change. Did you know that it was our proposals to parliament that led to permanent hires in place of employment agencies at construction sites in Østlandet? The same is true with regards to Norway acknowledging Palestine as a state. Your vote will enable us to do even more.

Prices are increasing, as are the profits of grocery chains and banks. But what about ordinary people? They deserve more: More money, more agency and more hope for the future.

Other parties have failed again and again: inequality has only increased. The time has come to vote for a challenger.

RØDT IS WORKING FOR:

- A dentist should not be more expensive than a doctor.
- A price cap on power at 35 øre/kwh for both people and businesses.
- Lower taxes on normal and low level incomes.

Price cap on electricity

Electricity should be a common good - not something sold to us at extreme and unstable prices through a market.

For 100 years, we have built Norway with renewable hydro electricity, to the benefit of both people and industry. We can continue in that direction if we secure national, democratic control over our electricity.

RØDT IS WORKING FOR:

- A price cap on electricity, based on production costs.
- No more subsea cables to other countries.
- A veto against EU's 4th Energy Package.
- Greatly increasing funding of energy conserving measures.
- No more wind power plants: we need to protect our nature.

Steady employment and fair retirement

Working people are the ones that truly generate value in society, yet many gain too little for their efforts. It is unfair that stock ownership or inheritance is more profitable than hard work.

Rødt wants to stop contingency work and employers that undermine permanent hires and the labor movement.

And when you get sick, or retire after many years of work, you should not be punished with a life below the poverty line the way many are today.

RØDT IS WORKING FOR:

- Strengthen the right to reliable full time employment. Remove employment agencies from the equation.
- Defending and improving people's sick leave.
- Better pensions and minimum welfare pay so that no one has to live below the poverty line.

Free Palestine

The genocide in Gaza must end. To allow state leaders to disregard international law is to allow that «might makes right». Norway has to do more to put pressure on Israel.

Just days after Russia's invasion of Ukraine, the Minister of Finance instructed the Oil fund to withdraw from Russia. Why is it not the same with Israel?

RØDT IS WORKING FOR:

- A total boycott of Israel. The Oil fund must be made to withdraw.
- Stop selling Norwegian munitions and military equipment to Israel.
- Criminal proceedings against war criminals and those that commit genocide.

Democracy, not elite rule

Oligarchs around the world are seizing power and enriching themselves at the expense of everyone else.

An elite within the EU, civil services and public enterprises now grow increasingly powerful, all while never having been elected. Rødt wants to move power away from the elite, to the people and to democracy.

RØDT IS WORKING FOR:

- Keeping Norway out of the EU.
- Replacing the EEA with a standard, balanced trade agreement.
- Moving power away from unelected officials and international bodies, to actually elected representatives.

Affordable dental care

A trip to the doctor will never cost you a lot; it is largely covered through our welfare system. Sadly, the dentist is not. When it comes to dental healthcare, people are unequal. Therefore, a proper dental care reform is an important issue for us this election.

RØDT IS WORKING FOR:

- A 2.500 kr cap on dental fees.
- Everyone should have the right to urgent dental care.
- Good dental care across the whole country.
